

Easy-Shake Dispenser

Easy-Shake is a revolutionary hand held dispenser. It allows dispensing **one** applicator at a time to the **last** applicator without touching other applicators.

It has a semi-cylindrical shape with a flat side on one side and a round shape on the rest of the body of the dispenser. The flat side facilitates guiding the applicators to a passageway. The shield covering separates the main body of the dispenser from the passageway. The purpose of separating the main body from the passageway is to disallow applicators to pile on top of each other in the passageway. As a result only one applicator is dispensed at a time – to the last applicator. Only one applicator is touched at a time as only one applicator is dispensed. The problem of cross contamination is solved with Easy-Shake Dispenser.

Holding Position of Easy-Shake

Multi-Brush Multi-Colors™ for Multiple Procedures

Disposable
Micro Applicators

Denbur, Inc.

**Multi-Brush Multi-Colors
Disposable Micro Applicators**

Patented tapered tip facilitates direct access to limited, small and conservative prep areas. With the white fibers removed, the tapered shape and size of tip is clearly visible.

The composition of the applicators are micro, non-lint fibers. The neck may be bent to any suitable angle for maximum accessibility.
